Part I History

CHAPTER 1. THE EARLY HISTORY OF AUTOMATED DEDUCTION	3
<i>Martin Davis</i>	
1 Presburger's Procedure	5
2 Newell, Shaw & Simon, and H. Gelernter	6
3 First-Order Logic	7
Bibliography	12
Index	15

Part II Classical Logic

CHAPTER 2. RESOLUTION THEOREM PROVING	19
<i>Leo Bachmair and Harald Ganzinger</i>	
1 Introduction	21
2 Preliminaries	22
3 Standard Resolution	28
4 A Framework for Saturation-Based Theorem Proving	34
5 General Resolution	46
6 Basic Resolution Strategies	59
7 Refined Techniques for Defining Orderings and Selection Functions	66
8 Global Theorem Proving Methods	84
9 First-Order Resolution Methods	89
10 Effective Saturation of First-Order Theories	91
11 Concluding Remarks	93
Bibliography	94
Index	97
CHAPTER 3. TABLEAUX AND RELATED METHODS	99
<i>Reiner Hähnle</i>	
1 Introduction	101
2 Preliminaries	101
3 The Tableau Method	105
4 Clause Tableaux	123

5	Tableaux as a Framework	150
6	Comparing Calculi	162
7	Historical Remarks & Resources	165
	Bibliography	166
	Notation	174
	Index	175
CHAPTER 4. THE INVERSE METHOD		177
<i>Anatoli Degtyarev and Andrei Voronkov</i>		
1	Introduction	179
2	Preliminaries	183
3	Cooking classical logic	184
4	Applying the recipe to nonclassical logics	206
5	Naming and connections with resolution	217
6	Season your meal: strategies and redundancies	230
7	Path calculi	231
8	Logics without the contraction rules	252
9	Conclusion	258
	Bibliography	262
	Index	266
CHAPTER 5. NORMAL FORM TRANSFORMATIONS		269
<i>Matthias Baaz, Uwe Egly, and Alexander Leitsch</i>		
1	Introduction	271
2	Notation and Definitions	274
3	On the Concept of Normal Form	283
4	Equivalence-Preserving Normal Forms	285
5	Skolem Normal Form	291
6	Conjunctive Normal Form	302
7	Normal Forms in Nonclassical Logics	319
8	Conclusion	323
	Bibliography	324
	Index	328
CHAPTER 6. COMPUTING SMALL CLAUSE NORMAL FORMS		331
<i>Andreas Nonnengart and Christoph Weidenbach</i>		
1	Introduction	333
2	Preliminaries	334
3	Standard CNF-Translation	336
4	Formula Renaming	343
5	Skolemization	348
6	Simplification	355
7	Bibliographic Notes	359
8	Implementation Notes	360

Bibliography	361
Index	363

Part III Equality and other theories

CHAPTER 7. PARAMODULATION-BASED THEOREM PROVING	367
---	-----

Robert Nieuwenhuis and Albert Rubio

1 About this chapter	369
2 Preliminaries	377
3 Paramodulation calculi	381
4 Saturation procedures	395
5 Paramodulation with constrained clauses	410
6 Paramodulation with built-in equational theories	417
7 Symbolic constraint solving	421
8 Extensions	423
9 Perspectives	425
Bibliography	428
Index	435

CHAPTER 8. UNIFICATION THEORY	439
-------------------------------	-----

Franz Baader and Wayne Snyder

1 Introduction	441
2 Syntactic unification	444
3 Equational unification	463
4 Syntactic methods for E -unification	482
5 Semantic approaches to E -unification	497
6 Combination of unification algorithms	507
7 Further topics	513
Bibliography	515
Index	524

CHAPTER 9. EQUALITY REASONING IN SEQUENT-BASED CALCULI	527
--	-----

Anatoli Degtyarev and Andrei Voronkov

1 Introduction	529
2 Translation of logic with equality into logic without equality	544
3 Free variable systems	553
4 Early history	560
5 Simultaneous rigid E -unification	562
6 Incomplete procedures for rigid E -unification	569
7 Sequent-based calculi and paramodulation	576
8 Equality elimination	584
9 Equality reasoning in nonclassical logics	595
10 Conclusion and open problems	607

Bibliography	609
Calculi and inference rules	619
Index	620
CHAPTER 10. AUTOMATED REASONING IN GEOMETRY	623
<i>Shang-Ching Chou and Xiao-Shan Gao</i>	
1 A history review of automated reasoning in geometry	625
2 Algebraic approaches to automated reasoning in geometry	628
3 Coordinate-free approaches to automated reasoning in geometry	648
4 AI approaches to automated reasoning in geometry	650
5 Final remarks	656
Bibliography	657
Index	665
CHAPTER 11. SOLVING NUMERICAL CONSTRAINTS	667
<i>Alexander Bockmayr and Volker Weispfenning</i>	
1 Introduction	669
2 Linear constraints over fields	674
3 Linear diophantine constraints	695
4 Non-linear constraints over continuous domains	718
5 Non-linear diophantine constraints	736
Bibliography	739
Index	754

Part IV Induction

CHAPTER 12. THE AUTOMATION OF PROOF BY MATHEMATICAL INDUCTION	761
<i>Alan Bundy</i>	
1 Introduction	763
2 Induction Rules	764
3 Recursive Definitions and Datatypes	767
4 Inductive Proof Techniques	771
5 Theoretical Limitations of Inductive Inference	779
6 Special Search Control Problems	781
7 Rippling	792
8 The Productive Use of Failure	805
9 Existential Theorems	809
10 Interactive Theorem Proving	814
11 Inductive Theorem Provers	816
12 Conclusion	819
Bibliography	820
Main Index	824
Name Index	826

CHAPTER 13. INDUCTIONLESS INDUCTION	827
<i>Hubert Comon</i>	
1 Introduction	829
2 Formal background	833
3 General Setting of the Inductionless Induction Method	839
4 Inductive completion methods	841
5 Examples of Axiomatizations \mathcal{A} from the Literature	852
6 Ground Reducibility	862
7 A comparison between inductive proofs and proofs by consistency	870
Bibliography	871
Index	874

Part V Higher-order logic and logical frameworks

CHAPTER 14. HIGHER-ORDER UNIFICATION AND MATCHING	879
<i>Gilles Dowek</i>	
1 Type Theory and Other Set Theories	881
2 Simply Typed λ -calculus	888
3 Undecidability	893
4 Huet's Algorithm	897
5 Scopes Management	905
6 Decidable Subcases	910
7 Unification in λ -calculus with Dependent Types	918
Bibliography	923
Index	930
CHAPTER 15. CLASSICAL TYPE THEORY	933
<i>Peter B. Andrews</i>	
1 Introduction to type theory	935
2 Metatheoretical foundations	945
3 Proof search	955
4 Conclusion	966
Bibliography	967
Index	973
CHAPTER 16. LOGICAL FRAMEWORKS	977
<i>Frank Pfenning</i>	
1 Introduction	979
2 Abstract syntax	981
3 Judgments and deductions	989
4 Meta-programming and proof search	1010
5 Representing meta-theory	1022
6 Appendix: the simply-typed λ -calculus	1033

7	Appendix: the dependently typed λ -calculus	1037
8	Conclusion	1044
	Bibliography	1049
	Index	1059

Part VI Non-classical logics

CHAPTER 17. REASONING IN EXPRESSIVE DESCRIPTION LOGICS		1065
<i>Diego Calvanese, Giuseppe De Giacomo, Maurizio Lenzerini, and Daniele Nardi</i>		
1	Introduction	1067
2	Description Logics	1070
3	Description Logics and Propositional Dynamic Logics	1077
4	Unrestricted Model Reasoning	1082
5	Finite Model Reasoning	1094
6	Beyond Basic Description Logics	1104
7	Conclusions	1110
	Bibliography	1110
	Index	1117
CHAPTER 18. NONMONOTONIC REASONING: TOWARDS EFFICIENT CALCULI AND IMPLEMENTATIONS		1121
<i>Jürgen Dix, Ulrich Furbach, and Ilkka Niemelä</i>		
1	General Nonmonotonic Logics	1124
2	Automating General Nonmonotonic Logics	1140
3	From Automated Reasoning to Disjunctive Logic Programming	1160
4	Nonmonotonic Semantics of Logic Programs	1177
5	Implementing Nonmonotonic Semantics	1191
6	Benchmarks	1212
7	Conclusion	1220
	Bibliography	1221
	Index	1232
CHAPTER 19. AUTOMATED DEDUCTION FOR MANY-VALUED LOGICS		1235
<i>Matthias Baaz, Christian G. Fermüller, and Gernot Salzer</i>		
1	Introduction	1237
2	What is a many-valued logic?	1238
3	Classification of proof systems for many-valued logics	1241
4	Signed logic: reasoning classically about finitely-valued logics	1248
5	Signed resolution	1257
6	An example	1269
7	Optimization of transformation rules	1273
8	Remarks on infinitely-valued logics	1275

Bibliography	1276
Index	1281

CHAPTER 20. ENCODING TWO-VALUED NON-CLASSICAL LOGICS	
IN CLASSICAL LOGIC	1283
1 Introduction	1285
2 Background	1290
3 Encoding consequence relations	1299
4 The standard relational translation	1303
5 The functional translation	1320
6 The semi-functional translation	1335
7 Variations and alternatives	1345
8 Conclusion	1355
Bibliography	1357
Index	1362

Part VII Decidable classes and model building

CHAPTER 21. MODEL CHECKING	1367
<i>Edmund M. Clarke and Bernd-Holger Schlingloff</i>	
1 Introduction	1369
2 Logical Languages, Expressiveness	1373
3 Second Order Languages	1386
4 Model Transformations and Properties	1402
5 Equivalence reductions	1413
6 Completeness	1421
7 Decision Procedures	1432
8 Basic Model Checking Algorithms	1443
9 Modelling of Reactive Systems	1456
10 Symbolic Model Checking	1467
11 Partial Order Techniques	1483
12 Bounded Model Checking	1487
13 Abstractions	1491
14 Compositionality and Modular Verification	1496
15 Further Topics	1499
Bibliography	1506
Index	1520

CHAPTER 22. RESOLUTION DECISION PROCEDURES	1523
<i>Christian G. Fermüller, Alexander Leitsch, Ulrich Hustadt, and Tanel Tammet</i>	
1 Introduction	1525
2 Notation and definitions	1526

3	Decision procedures based on ordering refinements	1534
4	Hyperresolution as decision procedure	1546
5	Resolution decision procedures for description logics	1562
6	Related work	1574
	Bibliography	1575
	Index	1579
CHAPTER 23. TERM INDEXING		1583
<i>I.V. Ramakrishnan, R. Sekar, and Andrei Voronkov</i>		
1	Introduction	1585
2	Background	1589
3	Data structures for representing terms and indexes	1597
4	A common framework for indexing	1601
5	Path indexing	1615
6	Discrimination trees	1623
7	Adaptive automata	1631
8	Automata-driven indexing	1641
9	Substitution trees	1648
10	Unification factoring	1652
11	Multiterm indexing	1656
12	Issues in perfect filtering	1658
13	Code trees	1659
14	Indexing modulo AC-theories	1669
15	Elements of term indexing	1673
16	Indexing in modern first-order theorem provers	1678
17	New directions for indexing	1679
	Bibliography	1679
	Index	1685
CHAPTER 24. MODEL ELIMINATION AND CONNECTION		
TABLEAU PROCEDURES		1689
<i>Reinhold Letz and Gernot Stenz</i>		
1	Introduction	1691
2	Clausal Tableaux and Connectedness	1692
3	Further Structural Refinements of Clausal Tableaux	1710
4	Global Pruning Methods in Model Elimination	1714
5	Shortening of Proofs	1723
6	Completeness of Connection Tableaux	1736
7	Architectures of Model Elimination Implementations	1744
8	Implementation of Refinements by Constraints	1766
9	Experimental Results	1776
10	Outlook	1781
	Bibliography	1783
	Index	1787
